

**Rosea Mimosa**

*Albizia julibrissin 'Rosea'*

Height: 30 feet

Spread: 30 feet

Sunlight: ○

Hardiness Zone: 5b

Other Names: Silktree

**Description:**

Attractive airy foliage and broad crowned form make this a highly desired tree, casts light shade, leaves tend to close for the night; interesting and graceful rose-pink fuzzy flowers are fragrant and will scent the air

**Ornamental Features**

Rosea Mimosa features showy fragrant rose pincushion flowers along the branches in mid summer. It has dark green deciduous foliage. The ferny bipinnately compound leaves do not develop any appreciable fall color. The fruits are showy brown pods displayed in early fall.

**Landscape Attributes**

Rosea Mimosa is a deciduous tree with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This tree will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Rosea Mimosa is recommended for the following landscape applications;

- Accent
- Shade

## **Planting & Growing**

Rosea Mimosa will grow to be about 30 feet tall at maturity, with a spread of 30 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 60 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
