

Sweet Katie Burgundy Desert Willow
Chilopsis linearis 'Sweet Katie Burgundy'

Height: 20 feet

Spread: 20 feet

Sunlight: ○ ●

Hardiness Zone: 6b

Description:

A multi-stemmed selection that can be trained to a single trunk; fragrant burgundy-violet blooms from late spring until fall; produces fewer of the weeping pods that persist into winter; drought tolerant, watering should be deep and infrequent

Ornamental Features

Sweet Katie Burgundy Desert Willow features showy clusters of fragrant burgundy trumpet-shaped flowers with violet overtones and yellow throats at the ends of the branches from late spring to early fall. It has emerald green deciduous foliage. The narrow leaves do not develop any appreciable fall color. However, the fruit can be messy in the landscape and may require occasional clean-up.

Landscape Attributes

Sweet Katie Burgundy Desert Willow is a multi-stemmed deciduous tree with a rounded form and gracefully weeping branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Sweet Katie Burgundy Desert Willow is recommended for the following landscape applications;

- Accent
- Shade
- Hedges/Screening

Planting & Growing

Sweet Katie Burgundy Desert Willow will grow to be about 20 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
